💼 Experience

○ Tickles digital Agency

Front-end developer

2017 - 2021

5 years

I started as an intern and stayed on as a full-time employee at a company where we built custom Magento 2 shops for clients of all sizes and industries. We worked in a Scrum-style team with a designer and back-end developer, where my task was to replicate designs to working shops with (p)HTML, SCSS, jQuery, KnockoutJS, and PHP when needed. Some of the recent shops that I helped deliver include QHP Vedder Vedder Alcomex and many more.

○ Distil / Lasaulec

Software Developer

2022 - Present

In-house multinational company which provides multiple SaaS solutions. I started by helping to set up a React project, which was my first experience with React. Later on, I insisted on rebuilding the entire front-end of the main shop due to legacy CSS and lack of semantic HTML. I scraped every line and rebuilt feature by feature in tight collaboration with the designer and back-end developers, who used C#/.NET. The front-end consisted of my own (open source) SCSS boilerplate, vanilla JS, and KnockoutJS. It is still a work in progress and in-house code, but I'd love to share some.snapshots.

🏛 Education

2013 - 2017

Graphic design

ROC Friese
poort Sneek

Tickles offered me a full-time job after my internship, otherwise, I would have continued studying computer science or multimedia design.

🔀 Methodology / Approach

| Component based architecture | Agile methodology if requested | Autonomy when possible |

| Learning from seniors, giving to juniors. |

🔧 Tools

| Git | VS Code/JetBrains | Jira/Azure | NPM/Composer/Yarn/Gulp |

| Adobe suite/Figma design tools | Gitlab/Github/Bitbucket | Terminal environment/VIM |

| Familair with deployments (manual SSH or CI/CD) |

👤 About me

I'm Remco Stoeten, a 26-year-old graphic design graduate turned frontend developer with 6 years of experience. I spent 5 years at Tickles Digital Agency specializing in creating custom e-commerce solutions. Currently, I work in-house at a multinational company which provides in-house and SaaS solutions. In my current role, I'm responsible for the entire frontend of the corporate shop. While my primary experience is with vanilla JavaScript and jQuery, I'm working hard to expand my skill set to include modern stack frameworks such as React, supersetted with Next.js and TypeScript, which can be seen on my Github. I'm experienced working autonomously and in Scrum settings, always eager to learn and push myself to deliver the best possible results.

🎯 Career Objective

I have a big passion for CSS and enjoy creating visually appealing UIs. In fact, I hate seeing poorly designed applications. Currently, I am spending a lot of time expanding my skills in modern stack frameworks. While working at an agency and on a SaaS product, I have primarily used vanilla JavaScript, jQuery, and KnockoutJS due to the CMS limitations. I learned how to replicate designs pixel-perfect, which was demanded by strict design colleagues, so that's something I'm quite keen on, but I also know how to deal with less strict designs if time is a factor. To improve my skills, I am building a playground site in Next.js, TypeScript, and SCSS, which has features such as WhatsApp text export, API calls, search, task/kanban board, and authentication (WiP). I want to expand my knowledge in this area and focus on frameworks like React, Next, Vue, or Svelte instead of building dozens of Magento 2 and static sites, although I wouldn't mind building advanced UIs since I love CSS.

💬 Skills / Expsoure

| HTML 5 | CSS | SCSS/LESS | Javascript |

| React/NextJS and legacy libraries like jQuery |

| E-commerce CMS systems such as Magento2 |
